FLAVONOIDOK

anti-tumour effect

Most flavonoids are able to inhibit processes that play a role in the development of cancerous lesions and may also reduce the side effects of chemotherapy. This may be related to their free radical scavenging and neutralising effects, but also to their anti-inflammatory and immunomodulatory properties. By consuming these substances, the destructive effects of the harmful processes that are introduced into the body by environmental influences can be reduced, thus protecting the cells and ensuring their proper functioning.

The suppressive effect of flavonoids on tumourigenesis has been demonstrated in thousands of studies (*in vivo*, *in vitro*, *in silico*). Flavonoids are capable of exerting inhibitory effects at all stages of the multistep process of tumour development, from inhibition of initiation through inhibition of proliferation to inhibition of metastasis.

Malignant tumour cells in different cancer types share common characteristics that flavonoids can effectively inhibit.

Research has found flavonoids to be effective in supporting several important anti-tumour processes.

One of these mechanisms is the inhibition of tumour angiogenesis, as insufficient blood supply slows or stops tumour growth and, in favourable cases, reverses the process, i.e. tumour cells die.

Another important characteristic of tumour cells is that they deceive immune cells whose job it is to recognise and eliminate harmful cells. Flavonoids are able to significantly enhance the activity of these immune cells, so that the immune system can more effectively destroy tumour cells.

Apoptosis is a form of programmed cell death, which in normal cells works by the cell destroying itself when the body signals the cell to do so. This is the body's way of protecting itself against defective cells from dividing or functioning. Tumour cells also bypass this mechanism, but several flavonoids can trigger apoptosis in tumour cells.

The support of these processes not only plays an important role in tumour prevention, but in many cases these effects of flavonoids can reduce the size of diagnosed tumours, significantly facilitating the healing process. Flavonoids can also be used effectively in combination with protocol therapies.

With the technology we have developed and applied, bioflavonoids significantly support tumour suppressor genes, the most important of which is the p53 gene, which controls other tumour suppressor genes as well as various DNA repair processes and cell division.

It stops the cell cycle at a certain point and then controls DNA. If the DNA is intact, it allows cell division to take place. If it finds a damage in the DNA, it triggers the mechanism to correct the damage and if the repair is successful, the process goes through again. If it fails to correct the damage in the DNA, it does not allow the cell to divide, it sends the cell into apoptosis, so that the cell dies in a programmed way without causing any damage to the organism.

FLAVIN77 CYCLO CYTO 7x100 ml

High-quality product with increased active ingredient content and added cyclized flavonoids for the prevention of tumours, activation of anti-tumour processes and supportive therapy of protocol treatments.

The active ingredients of FLAVIN 77 CYCLO CYTO are special cyclized bioflavonoids optimized for the prevention of tumors, activation of anti-tumor processes and supportive therapeutic use in addition to immune system boosting. The specific composition was determined based on the results of epidemiological and epigenetic meta-analyses.

The recommended dosage for prophylaxis is 20 ml per day.

Recommended dosage for diagnosis 50-100 ml per day.

FLAVIN77 CYCLO CYTO H 10x100 ml

Hydrogen-enriched high quality product with increased active ingredient content and added cyclized flavonoids for the prevention of tumours, activation of anti-tumour processes and supportive therapy of protocol treatments.

It has significant supportive effects in most phases of tumour formation.

The active ingredients of FLAVIN 77 CYCLO CYTO H are specific cyclized bioflavonoids optimized for the prevention of tumors, activation of anti-tumor processes and supportive therapeutic use in addition to immune system boosting. The specific composition was determined based on the results of epidemiological and epigenetic meta-analyses.

The recommended dosage for prophylaxis is 20 ml per day.

Recommended dosage for diagnosis 50-100 ml per day.

FLAVIN77 PREMIUM CYCLO CYTO 7x100 ml

Exclusive product with high active ingredient content for premium consumers, with cyclized flavonoids for the prevention of tumours, activation of anti-tumour processes and supportive therapy of protocol treatments.

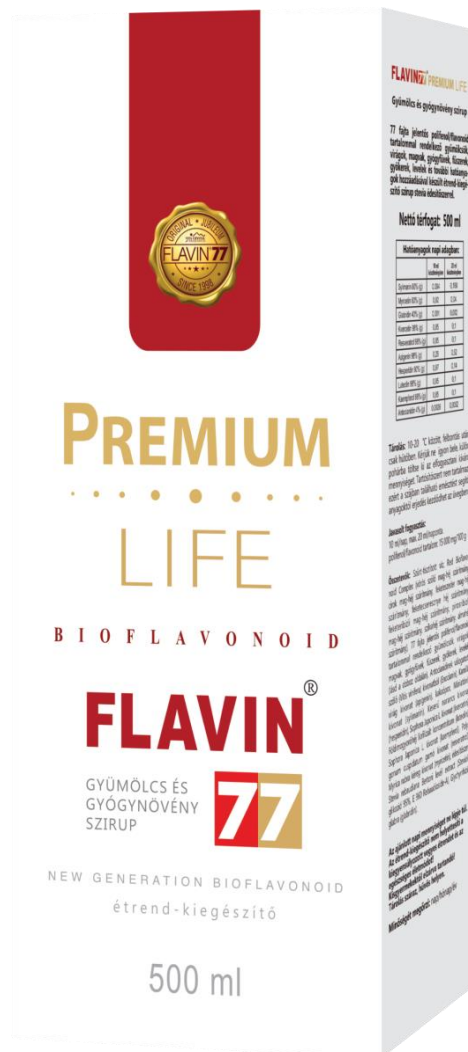

It has significant supportive effects at most stages of tumour formation.

The active ingredients of FLAVIN 77 CYCLO CYTO PREMIUM are special cyclized bioflavonoids that, once in the nucleus, are able to deliver tumour suppressor genes such as p53, the most important gene for tumour suppression. The specific composition was determined based on the results of epidemiological and epigenetic meta-analyses.

The recommended dosage for prophylaxis is 20 ml per day.

Recommended dosage for diagnosis 50-100 ml per day.

FLAVIN77 PREMIUM LIFE 250 ml, 500 ml

Traditional, broad spectrum bioflavonoid complex to improve general health, rejuvenate cells, increase the number of healthy years of life. A traditional, high quality formulation that also uses bioflavonoid sources from the herbal world to repair and purify cellular DNA and enhance self-renewal.

Recommended dosage: 20-50 ml per day

FLAVONOIDS

cardiovascular protection

In 1936, Hungarian researchers Albert Szent-Györgyi and István Rusznyák were the first to show that two flavonoids from citrus fruits (rutin, naringenin) reduce capillary fragility and permeability. These compounds play an essential role in plants and have vitamin-like (but not only) effects in humans.

Over the last century, a large body of research has demonstrated the important protective roles of several flavonoids in cardiovascular function.

Flavonoids support cardiovascular health in several ways. They strengthen the walls of both arteries and veins, increasing the elasticity of blood vessels. They reduce cholesterol levels and inhibit the development of atherosclerosis, helping blood flow.

As a consequence of vascular effects and in other ways, they support heart health, help regulate blood pressure and reduce the risk of blood clots.

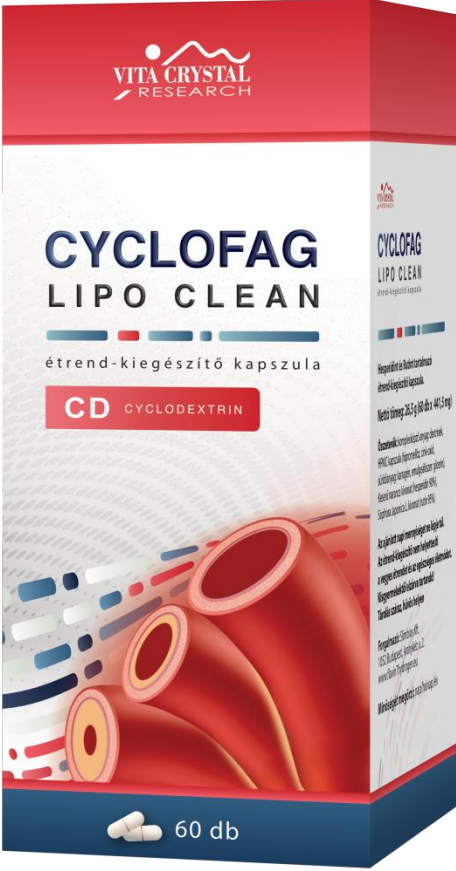

A high quality product with a significant active ingredient content of cyclized flavonoids to support the cardiovascular system.

The specific composition of FLAVIN 77 CYCLO CARDIO is determined by cyclized bioflavonoids. The active ingredients protect and cleanse the vascular system and improve heart function. This member of the range contains high doses of specific polyphenols in cyclized form.

Recommended dosage: 20-50 ml per day

CYCLOFAG LIPO CLEAN 60 capsules

Active ingredients of the product are bioflavonoids, cyclodextrins, cyclized bioflavonoids. The active ingredient is a matrix, which is vascular cleanser, antioxidant and anti-inflammatory.

The active ingredients in the formulation are able to bind and transport lipids in the blood out of the body, thus lowering cholesterol levels, helping to break down calcified plaques in the arteries, thereby reducing atherosclerosis.

Cyclodextrins enhance the autophagic cleansing ability of cells, helping to remove organic toxins from the body, thus aiding regeneration and detoxification.

Recommended Intake: 2-4 capsules per day

OLIMPIQ PREMIUM STEM CELL MULTIPLICATION PRODUCTS

Based on scientific literature and consumer feedback, the ingredients and active ingredients of Olimpiq SXC 350% Premium products ensure better regeneration of tissues and organs by increasing the amount of stem cells circulating in the peripheral blood.

People with higher circulating stem cell numbers have faster replacement of damaged cells with new cells. The body's regenerative potential is one of the most important indicators of health.

If our body naturally produces more stem cells, it can repair itself from dysfunction caused by disease, accident or simply ageing.

Stem cells can differentiate into any cell type, giving them the ability to repair different damaged tissues. In the Olimpiq SXC 350% Premium range, we use active complexes that allow epigenetic control of stem cell differentiation, so that a single formulation can specifically improve the regeneration of specific tissues.

OLIMPIQ SXC 350% PREMIUM HEART

2x60 capsules, 2x120 capsules

Olimpiq SXC 350% Premium HEART is mainly used to support the regeneration of the heart. It is recommended for athletes to increase efficiency. It improves the ejection fraction, i.e. increases the strength of the heart. We also particularly recommend this product for people who have had a heart attack, suffer from heart failure or arrhythmia, or have Post COVID symptoms.

Recommended dosage: 2x1-2 capsules A and 2x1-2 capsules B daily

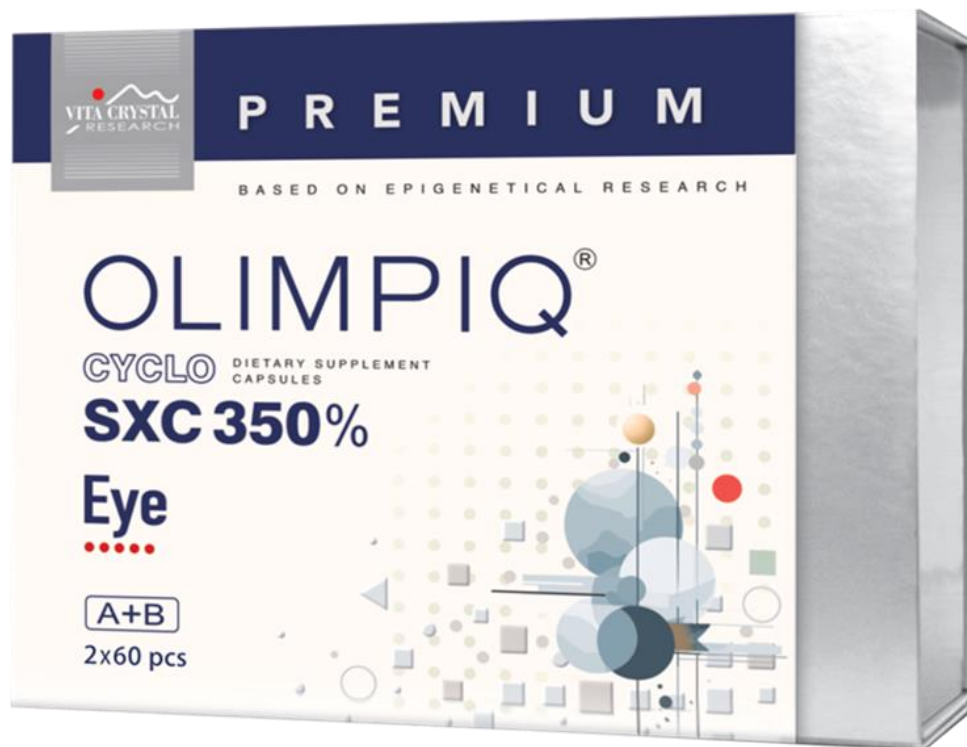

OLIMPIQ SXC 350% PREMIUM COGNIQ
2x60 capsules, 2x120 capsules

The Olimpik SXC 350% Premium COGNIQ product supports the regeneration of the central nervous system, improving neurogenesis. It is recommended for people who do intellectual work and for whom good memory and concentration are important. If you have a disease or condition that impairs cognition, memory and concentration, this product will help to increase brain regeneration.

Recommended dosage: 2x1-2 capsules A and 2x1-2 capsules B daily

OLIMPIQ SXC 350% PREMIUM EYE 2x60 capsules, 2x120 capsules

Diseases affecting the eye have a major impact on quality of life, so it is important that OLIMPIQ SXC 350% PREMIUM EYE stem cell supplementation helps in the prevention and supplementation of many diseases affecting the eye.

It helps the regeneration of retinal cells, resulting in improved vision. It is recommended for use in cases of retinal detachment, macular degeneration, diabetic retinopathy, cataracts and glaucoma, among others.

Recommended dosage: 2x1-2 capsules A and 2x1-2 capsules B daily

OLIMPIQ SXC 350% PREMIUM BONE 2x60
capsules, 2x120 capsules

Olimpiq SXC 350% Premium BONE supports the regeneration of the skeletal system and helps to heal fractures faster. It improves the bone remodelling process, making it suitable for osteoporosis and increases bone density. It should be used in the period prior to the implantation of bone and dental prostheses to increase the success of the implantation.

Recommended dosage: 2x1-2 capsules A and 2x1-2 capsules B per day

OLIMPIQ SXC 350% PREMIUM JOINTS 2x60 capsules, 2x120 capsules

The two most common musculoskeletal problems are arthritis and joint wear. These conditions are associated with significant pain, so it's good to know that stem cells can regenerate this area well.

Olimpiq SXC 350% Premium JOINTS helps regenerate cartilage, reducing joint wear and damage caused by arthritis by using excess stem cells to rebuild damaged tissue.

Recommended dosage: 2x1-2 capsules A and 2x1-2 capsules B daily

OLIMPIQ SXC 350% PREMIUM BEAUTY 2x60 capsules, 2x120 capsules

Our largest organ is our skin, the health of which is extremely important as it protects us from harmful environmental influences. The active ingredients in Olimpiq SXC 350% Premium BEAUTY help to regenerate epithelial cells, increase collagen and hyaluron production, and thus reduce wrinkles. It contributes to the health of hair and nails by improving keratin synthesis. The use of the product can enhance wound healing, allowing wounds to heal faster and more beautifully.

Recommended dosage: 2x1-2 capsules A and 2x1-2 capsules B daily

DOUBLE MAGIC HAIR TURBO 2x60 capsules

Contains the most outstanding active ingredients in the field in the best formulation available.

Hair grows fastest between the ages of 16 and 24, but as hair follicles are not produced throughout life, we tend to have less of them.

Causes of hair loss. Hair loss can also occur in both men and women, for example, in the case of iron, iron, zinc, iron and zinc, and in the case of iron and zinc, both men and women.

The ingredients in Double Magic Hair Turbo are effective in helping to maintain hair growth and colour, as they contain substances that make this possible.

They also support the function of the hair follicles. They also contain ingredients with anti-inflammatory properties to prevent further hair loss.

Recommended dosage: 2x1 A and 2x1 B capsules daily

DOUBLE HYALCO 2x120 capsules

This premium formulation contains a high concentration and high purity of hyaluronic acid and collagen in the most efficiently absorbed form. Collagen can play an important role in maintaining cartilage health, help slow down the aging process, make skin more elastic, and brighten and strengthen hair and nails.

Hyaluronic acid can protect cartilage from inflammation, help damaged tissue to recover.

Recommended dosage: 2x4 capsules daily
